

# Course Optics

In this course you will see the world as you have never seen it before. In each session, children and young people will have an approach to optics and its associated technologies through experimentation and guided exploration. Through a set of impressive experiments, the attendees are introduced to the concepts and fundamentals without the need for equations and books, which allows them to awaken curiosity and interest in areas related to optics through the reproduction of physical phenomena involved in everyday life in a visually stunning way.
