

# Course

## Augmented Reality

The purpose is to bring children and their training processes closer to cutting-edge technologies and software that could later become the backbone of their professional training through activities, games and interactive content that awakens their interest.

The training in technological and design skills focused on problem solving helps to develop their creativity to present projects and school assignments and facilitate their transition process to academic life to be less abrupt and more interactive and to awaken in each of them new concerns that allow them to freely develop their professional identity.
